CargoStream
Inspect *and* Identify

High Throughput Content Visibility

Spectrohm's high-speed screening uses patented radio wave-based technology to detect and identify package contents—at the speed of commerce.

CargoStream provides high-speed non-intrusive inspection for:

- Threats and contraband detection
- Item count
- Leaking containers
- Empty containers
- Content verification
- Fraud detection

Fast. Delivers results in real time.

Smart. Identifies and weighs materials. Reads labels and barcodes. Seamlessly integrates with automation.

Compact. Mobile or in-line. Smaller footprint than X-ray systems.

Safe. Low-power radio waves. No X-ray regulatory or safety issues.

Pilot Program

Spectrohm is seeking industry leaders to pilot this unique technology.
